

🚀 Production-Grade AI Agent Systems: 90% Automation, 60% Cost Reduction, Patent-Pending Innovation
👉 30+ Agent Orchestration Experts | LangGraph Specialists | Healthcare to HR Tech

🎯 ENGAGEMENT MODELS

Production AI Agent Development

- Complete multi-agent systems from architecture to deployment
- 3-6 month timeline to production-ready platform
- Includes monitoring, error handling, cost optimization

AI Integration & Automation

- Embed agents into Teams, Slack, CRM, ATS
- End-to-end workflow automation (80-90% coverage)
- Real-time event-driven architectures

Healthcare AI Innovation

- Patent-worthy innovation with clinical validation
- HIPAA-compliant architecture and data security
- Elderly/patient-accessible UX design

Enterprise AI Consulting

- Framework selection (LangGraph vs AutoGen vs CrewAI)
- Architecture design for scalability and cost optimization
- Technical debt reduction and AI system rescue

Flexible Engagement:

- Dedicated team
- Fixed-price MVP/prototype
- Code review & optimization
- Ongoing support & enhancement

🧠 AI AGENT TECH STACK

Agent Frameworks: LangGraph, AutoGen, Agents SDK, LlamaIndex, CrewAI + more

LLM Integration: OpenAI GPT-4, Anthropic Claude, Google Gemini, Llama 3, custom fine-tuning

RAG & Vector DBs: Pinecone, Weaviate, Chroma, Qdrant

Orchestration: LangChain, LlamaIndex, agent memory systems, tool-calling APIs

Backend: FastAPI, Node.js, PostgreSQL, Supabase, Redis

Frontend: React, Next.js 15, TypeScript

Mobile: Flutter, FlutterFlow

📌 PROVEN PROJECT PORTFOLIO 📌

AI-Powered Healthcare:

- Patent-pending dementia care app (50K+ downloads, 40% caregiver stress reduction)

- AI activity generation with behavioral prediction models
- Memory box AI with photo story generation

Multi-Agent Recruitment Automation:

- 20+ agent supervisor architecture reducing screening from 2 days → 2 hours
- Microsoft Teams-integrated recruitment workflows
- 90% automation, 60% cost-per-hire reduction

AI SEO & Content Automation:

- 20+ specialized agents for end-to-end SEO execution
- Keyword research automation: 1 week → 30 minutes
- RAG-powered content generation with topical clustering

AI Construction Tech:

- Revit automation platform achieving 80% detailing time reduction
- Real-time Design Automation API integration

OUR CLIENTS CONSISTENTLY PRAISE US FOR

- Production-grade AI systems, not just POCs or demos
- Deep multi-agent expertise (supervisor patterns, 20+ agent orchestration)
- Healthcare innovation resulting in patent applications
- Enterprise integration mastery (Teams, Slack, ATS, Revit)
- Measurable business outcomes (90% time savings, 60% cost reduction)
- Rapid delivery (3-6 months from concept to production)
- Technical depth in both AI/ML and full-stack engineering
- Team consistency with dedicated engineers throughout project lifecycle

Multi Agent SEO Automation with 20+ AI Agents

Close the dialog

Completion date: Sep 1, 2025

AI Apps & Integration

AI Agent Development , LangChain , AI App Development , Docker , Vector Database , Next.js , Hierarchical Clustering , Vector Embedding , AI Classifier , Django , Python , PostgreSQL , Kubernetes

LangGraph orchestration, RAG integration, and end to end SEO workflow automation delivering 860%+ traffic growth

SITUATION

SEO agencies spend 1 week on comprehensive keyword research, 4 hours on content briefs, and 3 days on site audits per project. SEByte needed an AI platform to automate the entire SEO execution pipeline, from onboarding through research, clustering, to content generation, while maintaining expert level quality.

COMPLICATION

The challenge required orchestrating 20+ specialized AI agents with complex interdependencies, building custom topical clustering algorithms for semantic understanding, integrating RAG for client-specific knowledge bases, and implementing human-in-loop quality control, all while ensuring scalable, consistent outputs across diverse domains.

ACTION

We delivered a sophisticated multi agent platform in 5 months with a focused team:

- Built 20+ specialized agents orchestrated with LangGraph (onboarding, keyword research, SERP analysis, clustering, content generation, auditing)
- Developed custom topical clustering algorithms for semantic keyword grouping beyond simple string matching
- Implemented RAG system for private knowledge base integration (client docs, brand guidelines, case studies)
- Created editable prompt system with human-in-loop checkpoints at critical workflow stages
- Built FastAPI backend + Next.js dashboard with real-time analytics and workflow visualization

RESULT

- 🎯 Keyword research: 1 week → 30 minutes (99.6% faster)
- ⚡ Content briefs: 4 hours → 15 minutes (94% faster)
- 📈 Site audits: 3 days → 4 hours (91% faster)
- 🤖 20+ AI agents with full observability
- 📊 90%+ workflow automation coverage
- 💰 80% reduction in AI API costs through optimization
- ✅ Client results: 860-3,080% traffic increases

TECH STACK

Python, LangGraph, LangChain, OpenAI GPT-4, Anthropic Claude, Pinecone/Weaviate (vector DB), FastAPI, React, Next.js, TypeScript, PostgreSQL, Redis, Celery, AWS

Successfully launched to production with proven end-user ROI and extensible architecture.

Multi Agent SEO Automation with 20+ AI Agents

seobyte-1.PNG

Our agents build a deep understanding (knowledge repository) of your domain for topical and keyword research, and competitive intelligence.

seobyte-3.PNG

Content recommendations from in-depth keyword research, competitive intelligence, and company understanding

seobyte-4.PNG

Keyword-enriched, SEO-optimized content ready for driving high-intent users to your website.

seobyte-5.PNG

Detailed keyword and topic research with explanations, along with human-in-the-loop (HITL) checkpoints.

Flow of the keyword research agent - complete with interactions with keyword tools for accurate data and insights

Patent Pending AI Powered Dementia Care

Close the dialog

Completion date: Jun 10, 2025

AI Apps & Integration

LangChain , Hugging Face , Python , Django , Vector Database , Flutter , Next.js , PostgreSQL , Docker , Kubernetes , AI Agent Development , Game Development

SITUATION

8.8 million people in India live with dementia, creating massive caregiver burden for families managing daily care, behavioral changes, and fragmented healthcare coordination. Anvayaa needed a comprehensive mobile platform (iOS + Android) to reduce caregiver stress while improving patient engagement and quality of life.

COMPLICATION

The challenge required building 6+ AI systems for personalized care: adaptive activity generation, memory box with AI photo organization and story generation, behavioral prediction models, quality of life tracking with predictive analytics, PWD profiling, and real-time care recommendations, all with elderly-accessible UX, offline functionality, multilingual support, and HIPAA equivalent compliance.

ACTION

We delivered a patent-pending healthcare platform in 6 months with a specialized team:

- Built cross-platform Flutter app (iOS + Android) with offline first architecture
- Developed 6+ AI systems using LangChain/LangGraph + GPT-4 for personalized content generation
- Created custom TensorFlow models for behavioral prediction and intervention recommendations
- Implemented Memory Box AI with photo analysis, story generation, and video compilation
- Built real-time backend (Firebase + Supabase) with multi-device sync and caregiver coordination
- Designed elderly-accessible UI with voice interface and 6+ language support

RESULT

- 🎯 40% reduction in caregiver stress and burden
- ★ 5/5 star rating with positive family testimonials
- 🏆 Patent application filed
- 🤖 6+ AI systems: adaptive activities, memory box, predictions, quality tracking
- ⚡ 3x daily patient engagement with personalized games

TECH STACK

Flutter, Dart, LangChain, LangGraph, OpenAI GPT-4, TensorFlow, Firebase, Supabase, PostgreSQL, Google Vision API, Node.js, Python

Successfully launched to production with patent-pending innovation and measurable clinical impact.

AI Recruitment Platform - 20+ Agents Supervisor Architecture

Close the dialog

Completion date: Nov 1, 2025

AI Apps & Integration

AI Agent Development , LangChain , FastAPI , Celery , Microsoft Teams , Vector Database , Python , PostgreSQL

LangGraph supervisor orchestrating specialized recruitment agents with Microsoft Teams integration

SITUATION

Recruiting teams managing 500+ applicants monthly faced overwhelming operational burden: 2 full days of manual effort per hiring cycle spent on resume screening, email follow-ups, and interview scheduling. Fragmented workflows across multiple tools created inefficiency and inconsistent candidate evaluation.

NinjaHire needed an AI agent orchestration system to automate end to end recruitment while maintaining recruiter control and integrating with Microsoft Teams.

COMPLICATION

This required building a supervisor-based architecture coordinating 20+ specialized agents with complex interdependencies: intelligent task routing, multi step workflow orchestration, quality validation, persistent memory across long-running recruitment cycles (days/weeks), bidirectional ATS sync, real time Microsoft Teams integration, and transparent editable prompts for non technical recruiters.

ACTION

We built a sophisticated multi agent platform in 6 months with a focused AI team:

- Designed LangGraph supervisor architecture intelligently routing tasks to 20+ specialized sub-agents
- Built agents for: resume parsing, skill matching, screening, shortlisting, email/SMS/LinkedIn outreach, interview scheduling, feedback collection, pipeline management
- Implemented persistent memory with vector database for context across multi-day workflows
- Created event driven ATS integration with real time bidirectional sync
- Integrated Microsoft Teams API for notifications, calendar coordination, feedback collection
- Developed editable prompt system allowing recruiters to customize agent behavior without code

RESULT

- 🎯 90% faster candidate screening (2 days → 2 hours manual effort)
- 💰 60% cost per hire reduction
- 🤖 80% automation of recruitment operations
- 📈 10x candidate processing volume (500+ applicants/month)
- 🏗️ Single supervisor orchestrating 20+ specialized agents
- 🔔 Seamless Microsoft Teams integration
- ✍️ Editable prompts for recruiter customization
- 📊 Full workflow transparency with LangSmith tracing

TECH STACK

LangGraph, LangChain, LangSmith, OpenAI GPT-4, Pinecone/Weaviate, Python, FastAPI, Celery, Redis, PostgreSQL, React, Next.js, TypeScript, Microsoft Teams API, Microsoft Graph API

Successfully deployed with 80% automation and measurable ROI for recruiting teams.
